

Sustainable Freight Transport Global Programmes and Activities

The SFT- Global Programmes&Activities provides relevant information about institutions and organizations working on sustainable freight transport across all modes of transport. It also provides some information about funding organizations in this area.

Please choose a mode of transport in the picture below (maritime transport, ports, road transport, aviation, rail transport) by clicking on the yellow buttons, or access a list of organizations and institutions working on more than one mode of transport or on financing options (multi-modal transport, financing) by clicking on the blue buttons. You can also access a list showing all organizations and institutions by clicking on the link below the picture.

Maritime Transport

Maritime trade accounts for almost 90% of world trade and continues to expand. Emissions from global shipping are expected to increase by up to 250% by 2050, depending on economic growth and global energy demand. Sustainability and resilience-motivated initiatives span a broad range of issues and include safety, security, labour conditions, marine and air pollution, GHG emissions, as well as mitigating climate change.

Ports

The economic, environmental and social challenges facing ports include growing and concentrated traffic volumes. World container throughput in developing economies in 2015 has been almost 72%. Port performance is important as it affects a country's trade competitiveness. Organizations focusing on sustainable freight transport and ports focus among others on urban-port integration, port safety, and intermodal transport at ports.

Road Transport

Road transport is expected to increase significantly by 2050, increasing its share of total freight by 40%. CO₂ emissions from road transport are also projected to increase by 240% by 2050. Issues organizations dealing with sustainable road freight transport cover include road safety, security, fuels, and GHG emissions.

Rail Transport

Emissions from rail transport are projected to increase by 600% by 2050, following an increase in overall rail transport. Sustainable rail freight faces challenges from among others international harmonization efforts, facilitation of border crossings, safety, security, and CO₂ reduction.

AVIATION

Air transport only accounts for 2% of global carbon emissions. Demand for jet fuel is projected to grow by about 75% by 2050. In the area of sustainable air freight transport, organizations are working on safety and security issues, as well as on environmental aspects of air freight transport.

Multi-Modal Transport

Overall CO₂ emissions from trade-related international freight are expected to increase by a factor of 3.9 between 2010 and 2050. Many initiatives focus on mitigating climate change in the transport sector and on improving air quality. This part considers organizations and foundations working on sustainable freight transport across all modes on transport and/or looking at inter-modal transport solutions.

FINANCING

Financing of sustainable freight transport is often difficult. Public-private partnership contribution to sustainable transport is still lagging, focusing to date mostly on roadway development. This page considers foundations and other organizations that provide funds or other forms of financing for sustainable freight transport.

Name: Africa Finance Corporation (AFC)

Areas of work in sustainable freight transport: coming soon!

Programmes, activities, tools: coming soon!

Geographical scope: Africa

Links to other organizations and networks:
